Cutting Pieces to Fit and Eliminating Waste (for Slabs and Intermittent Footings)

Suggested Method:

1. Begin each row with full-size pieces.
2. Set the SlabVoid and/or filler pieces in line end-to-end.
3. Cross-cut pieces to fit shorter spaces, but do not use any piece less than 12" long.

If the space to be filled is less than 12":

a. Take out the last full piece and cut it in half.
b. Cut another full piece to fit and fill the remaining space with that longer piece.
c. Use both cut-off pieces in the next run, thereby eliminating waste.
